ROHAN PAUL

rohanpaul2468@gmail.com — LinkedIn — GitHub

About

Enthusiastic about cloud computing and machine learning, with a strong foundation in data structures and core computer science concepts like networking & OS. Enjoy solving problems and building scalable solutions, and always eager to take on new challenges and learn new technologies.

Skills

Languages: Python, C/C++, Java, SQL(MySQL)

Platforms: ServiceNow, AWS, Microsoft Azure

Machine Learning: ML Algorithms, Data Preprocessing, Feature Engineering, Model Training & Evaluation

Developer Tools: VS Code, IntelliJ, Git & GitHub

Projects

UtilityHub · *AWS, Microsoft Azure, Google Cloud Platform, Node.js Express.js* April 2026

The Multi-Cloud Utility Booking Platform is a serverless web application for booking shared resources while preventing double-booking through atomic SQL transactions. It uses HTML, CSS, JavaScript, Node.js, Express.js, PDFKit, AWS (Cognito, API Gateway, Lambda), Azure (SQL Database, Blob Storage), and GCP (Apps Script, Gmail API) for authentication, storage, notifications, and orchestration.

MindScan: Multimodal Depression Detection System *MLP Neural Network, SarvamAPI* Feb 2026

Built a web-based multimodal AI system to assess depression risk by analyzing conversational text sentiment, voice prosody, and facial micro-expressions. Developed a Fusion Engine to merge inputs into a single risk score with clinical categories (Low, Moderate, High). MLP neural network achieved 97.2% accuracy on a synthetic dataset. System generates automated, clinical-style PDF reports for screening purposes.

Energy Consumption Forecasting · *ML, PySpark, Grafana* Oct 2025

Research Paper Published. Developed a scalable smart-home energy forecasting system for electricity demand estimation. Processed large smart-meter datasets with PySpark, applied feature engineering, and trained Random Forest, XGBoost, SVM, and LSTM models. Random Forest delivered the best results with 76.48% accuracy and MAE of 0.4319 kWh. Built Grafana dashboards for consumption pattern visualization.

Experience

ION Aerospace India July 2025 – August 2025

Software Developer Intern

Contributed to the design and testing of drone navigation and control systems, focusing on enhancing flight algorithms and improving overall system reliability through real-world simulation environments.

Education

SRM Institute of Science & Technology, Kattankulathur

B.Tech Computer Science & Engineering w/s Cloud Computing *Expected 05/2027*

CGPA: 9.43

KiiT International School, Bhubaneswar

Higher Secondary School (12th) *2023*

Percentage: 84.6%

Divya Jyoti Convent School, Betnoti

Secondary School (10th) *2021*

Percentage: 84.8%

Certifications

Certified Application Developer – ServiceNow (2026)

Certified System Administrator – ServiceNow (2026)

Azure Data Fundamentals (DP 900) – Microsoft (2026)

Fortinet Certified Professional Cloud Security – Fortinet (2026)

Database Management System – NPTEL (2025)

Programming in Java – NPTEL (2024)

Cloud Computing – NPTEL (2024)

Co-curricular Activities

SharpAlthon by Sharpsys Hackathon · *Round 2* 2025

Built an AI-enabled CRM solution for smart lead management that evaluates and ranks leads using historical data, engagement behavior, and predicted conversion rates. Automates sales workflow prioritization, recommends tailored follow-up actions, and incorporates real-time monitoring, customer segmentation, and dynamic performance dashboards.

DAYZERO by CodeNex Hackathon · *Participation* 2025

Developed an AI/ML-based password strength analyzer evaluating length, character diversity, and similarity to common dictionary terms. Delivers real-time feedback and recommendations to improve password security using explainable AI methods.

Member, Cloud Nova Club SRM 2024–2025

Contributed to development and maintenance of the club website, enhancing functionality and user experience, while coordinating and organizing technical events for effective participant engagement.
